

## SPEEDWIRE SYSTEMS REMOTE BATTERY DISCONNECT

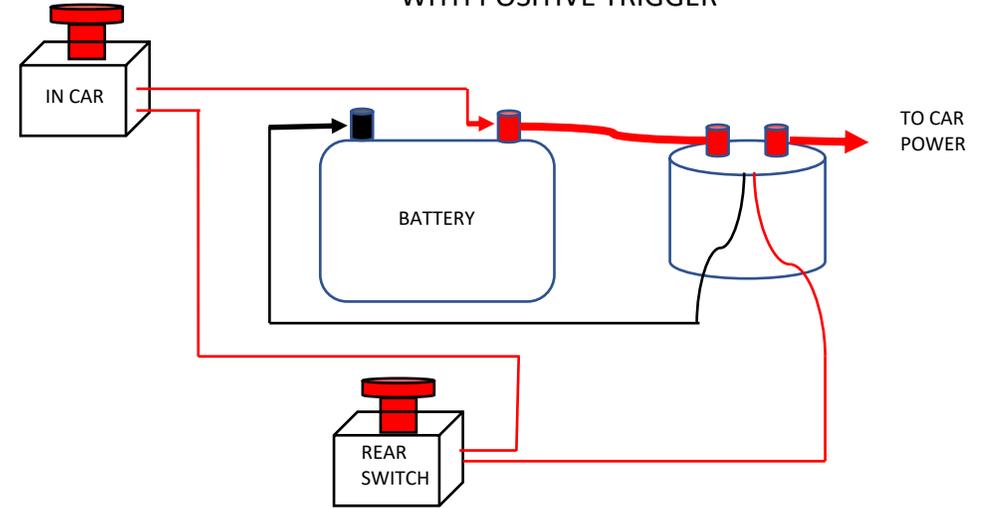

**NOTE:** Disconnect relay can handle 500 amps continuous and 2000 amp inrush when appropriate battery cable sizing is used. 1-2 gauge main power and ground cables are recommended for race cars, when using smaller cables for example 4 gauge your amperage capability is greatly reduced, and in most cases due to the high amperage draw of starters the 4 gauge cable will not be enough in higher temperature conditions to turn over your engine properly.

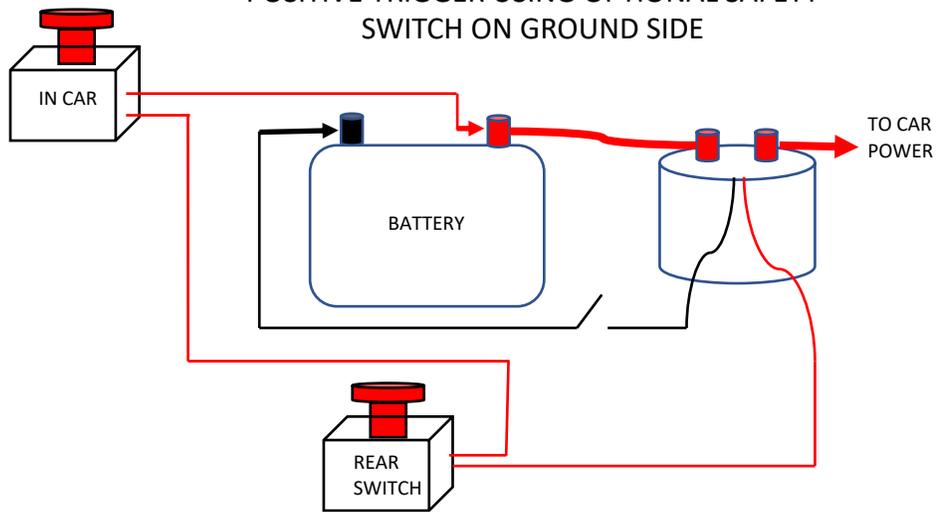

ONE BUTTON SYSTEM

IN CAR AND REAR SHUT OFF SYSTEM WITH POSITIVE TRIGGER

IN CAR AND REAR SHUT OFF SYSTEM WITH POSITIVE TRIGGER USING OPTIONAL SAFETY SWITCH ON GROUND SIDE

IN CAR AND REAR SHUT OFF USING BOTH TRIGGER METHOD ONE FOR EACH SWITCH
